

## **EYEWEAR WITH REPLACEABLE LENS**

### **Abstract of the Invention**

Eyewear with a replaceable lens include an elongate center member, a pair of temple arms, and a pair of connecting members. Each connecting member is secured to one of the temple arms and to the center member, and has a slot formed in a surface thereof. A lens is received in the slots of the connecting members, with a rear surface of the lens along an upper edge of the lens being spaced from the center member so as to form a gap therebetween. A nosepiece may be secured to a lower edge of the lens.
